Re: Freedom of Information Act Request EPA-R9-2015-003757

Dear Mr. Corbiere:

This is in response to your Freedom of Information Act request for a listing of public water systems using specified disinfection treatment processes and their contact information. The information is from EPA's Safe Drinking Water Information System and is provided in the enclosed file.

The listing includes public water systems nation-wide that use disinfection treatment processes with SDWIS codes 200, 401, 403, 461, and 627, per the specification in your e-mail message of 3/12/15. The listing is sorted, first, geographically by region and oversight agency (as a proxy for state); second, by water system type and size category; and finally by water system ID number and treatment process code. The water system types shown in the PWS Type Code column include community water systems (CWS), which serve the same people year-round; non-transient non-community water systems (NTNCWS), which serve the same group of at least 25 people for at least six months of the year but not year-round; and transient non-community water systems such as campgrounds, which serve a constantly changing population for shorter periods. Note that for water systems using more than one treatment process in the specified set, the contact information repeats for each process.

Should you need clarification on the contents of the listing, please contact Don Hodge, EPA Region 9 SDWIS database administrator, at 415-972-3240.

Sincerely,

A handwritten signature in black ink, appearing to read "Jane Diamond", written over the typed name and title.

Jane Diamond, Director
Water Division
